Mini Project (Final Task) Problem Statement: Build a complete pipeline that reads a CSV file from Blob Storage and processes it using Azure Data Factory.

Requirements:

- Source: CSV file in Blob
- Use: Linked Service + Dataset + Pipeline
- Process: Copy Data + Metadata check

Destination: New file/location

Screenshots:

The top screenshot displays the Azure Data Factory 'pipeline_superstore' interface. A notification at the top right states 'Publishing completed Successfully published'. The 'Activities' pane shows a pipeline with two activities: 'Get Metadata1' and 'Copy data1'. The 'Output' pane shows a table of activity results.
